HR Project Analysis

Modernizing Workplace Strategy & Workforce Dynamics Through Data-Driven Insights

Q2 2022 PERFORMANCE REVIEW

Project Overview

Mission: Transitioning to a Sustainable Long-Term Operational Model

The Strategic Vision

Our primary objective is to move away from **anecdotal policy-making** toward a rigorous, data-driven model. This transformation focuses on three core pillars:

- **Operational Efficiency:** Optimizing real estate footprints based on actual usage.
- **Employee Wellness:** Supporting health trends through proactive policy adjustments.
- **Centralized Intelligence:** Unifying disparate data into actionable insights.

Dataset Summary

- **Comprehensive Scope:** Analyzed behavioral tracking for approximately 85 employees/students during Q2 2022 (April - June).
- **Multidimensional Markers:** Tracking includes Presence, Absence, Sick Leave (SL), Paid Leave (PL), and Work From Home (WFH).
- **Data Consolidation:** Integrated three distinct monthly sheets into a single, unified longitudinal dataset.
- **Standardized Taxonomy:** Mapped abbreviated categories (e.g., SL, PL, WFH) to ensure consistent cross-period reporting.

Data Methodology

Leveraging Power BI & Power Query for Business Intelligence

ETL & Transformation Process

Power Query Logic

Implemented robust transformation templates to handle multi-sheet imports from Excel. We established consistent data types for dates and text to ensure seamless downstream analysis.

Column Unpivoting

Crucial to our strategy was the **Unpivot Other Columns** operation. This transposed individual date columns into a single attribute column, allowing for time-series analysis at scale.

Interactive Dashboard

Our Power BI dashboard provides a real-time visualization of presence insights and wellness markers.

- Presence % by Day/Month
- WFH vs. In-Office Ratios
- Sick Leave Variance Analysis
- Departmental Heatmaps

∗Sample metrics: Presence ~70.3%, WFH ~17.1%, SL ~2.0%

Weekly Attendance Patterns

Office presence peaks during the first half of the week (Mon-Wed), while WFH volume increases significantly on Thursdays and Fridays.

Wellness Spotlight: Sick Leave

75%

Monday SL Occurrences

Monday Wellness Fluctuations

Analysis reveals a high frequency of Sick Leave (SL) markers occurring on Mondays. This correlation suggests a critical need for weekly wellness resource planning and closer monitoring of early-week health trends.

Business Recommendations

Peak Engagement

Schedule town halls and training for Tue/Wed to ensure 90%+ participation.

Hybrid Sync

Formalize Thu/Fri as remote-first days to optimize facility costs.

Support Model

Implement proactive wellness check-ins on Mondays to address early-week absences.

Fostering Collaborative Culture

By aligning office events with high-occupancy days (Tuesdays and Wednesdays), the organization can significantly increase the ROI of engagement activities.

This strategic alignment not only maximizes participation but also reinforces a sense of shared purpose and physical presence when it matters most.
